

# Circuit Symbols

Electricity reference

- Cell — a single source of electrical energy.
- Battery — two or more cells joined together.
- Switch (open) — break in the circuit, no current flows.
- Switch (closed) — circuit is complete, current flows.
- Bulb — converts electrical energy to light.
- Motor — converts electrical energy to movement.
- Buzzer — converts electrical energy to sound.
- Wire — carries the current around the circuit.
- Ammeter — measures current in amps (A).
- Voltmeter — measures voltage (V).
