Day and Night

What happens when the Sun goes down?

What's happening?

Earth is a giant ball that spins. Half of Earth faces the Sun (it's daytime there), and the other half faces away (it's nighttime). Earth turns all the way around once every 24 hours, which is why we have day and then night and then day again.

Sort these into day or night

DAY	NIGHT	

Cut out and sort: owl hooting, rooster crowing, stars twinkling, playground at school, moon, sun, bedtime story, breakfast, fireflies, rainbow, campfire
